

FALCON Metal Detectors

Falcon manufactures the most sensitive metal detector available.

The Falcon Gold Tracker is designed to find gold but will find all metals (Au, Ag, Pt, Cu, Fe, Zn, Pb, etc.)

Produced in Mesa Arizona, the newest Falcon, the MD20, is the industry standard for electronic probes of all kinds. Its high frequency of 300 kHz and unique electronic and probe design have given it excellent ability to find super fine gold particles that other detectors and probes cannot find.

The Falcon can find particles of gold barely visible to the human eye!

Engineered for portability and ease of use, the FALCON is the tool you've been looking for.

Prospecting without a FALCON is like digging without a shovel

PRESENTS:**

Finding Gold with a FALCON

Nothing hunts like a Falcon.

Designed to find GOLD

Want to find more gold?

Most metal detectors are designed to find large targets and cover lots of ground. The **FALCON** is designed to find small gold other detectors miss and to get into places too small for other detectors. Operating at 300 kHz, the MD20 series is the most sensitive detector on the market. The MD20 has 20% more sensitivity and depth than its predecessor, the MD10, and more than twice the sensitivity of other manufacturers probes. The **FALCON** is a tool, not a toy. Every prospector needs one!

MD20 \$249.95

- TYPE: All Metal Motion Detector
- OPERATING FREQUENCY: 300kHz
- DIMENSIONS: 1.6"X 3.25"X 6"
- WEIGHT: 14 oz
- PROBE: Waterproof 6" probe on 5 foot cable
- BATTERIES: Two 9-volt alkaline.
- BATTERY LIFE: 40 to 50 hours
- TARGET ALERT: Built in speaker and 1/8" head-phone jack. Note: when using headphones, speaker is disabled.
- CONTROLS: Ground Balance and Sensitivity. Probe has adjustable copper ring for sensitivity selection.
- WARRANTY: Five year limited parts and labor.
- ACCESSORIES: (optional)
Headphones
Holster
Handle

Why Pan When You Can Scan?

Many times there is not enough water to pan in the desert. Simply place some dirt into a plastic pan, shake it a little to allow the gold to go to the bottom, then scan the bottom of the pan with the **FALCON**. While it is tempting to locate each piece of gold with the probe, the best use of time is made by throwing the gold bearing dirt into a bucket and taking it home to pan at your leisure. WHY take home dirt without knowing whether there is gold in it? Use the **FALCON** to make your time more profitable.

ACCESSORIES

HANDLE \$12.95

Use MD20 while standing. Especially useful probing under rocks and bushes or cold streams where you don't want to stick your hand. Probe cable threads up through 3 piece handle.

HOLSTER \$10.95

Carry and protect MD20 on your belt. Convenient Velcro straps hold detector, probe and cable.

HEADPHONES \$6.95

Hear those faint sounds better. Light weight headphones with 1/8 inch phone plug to match the jack on MD20.

Cracks and Crevices Yield Big GOLD.

Ask Paul about his find with the **FALCON**. Working a crevice in central Arizona, Paul found five small pieces of gold and a nugget that weighs over 1/2 ounce.

Tailings Piles Pay Off \$\$\$

Ever wonder whether that rock has gold in it? Many gold bearing rocks were tossed into tailings piles by old time miners because they couldn't see the gold. That had no way to electronically see gold like a **FALCON** does. One customer reports finding 16 oz of gold in a New Mexico tailings pile with his **FALCON!!!**

FALCON CLEAN UP PAN

\$7.95

Especially designed for cleaning up concentrates. This pan has no riffles, only fine grooves on the side (see inset). Often referred to as the dipping pan. Dipping the sharp edge of the pan into water allows black sands to slide off while the microgroove ridges hold gold. It is 11 inches in diameter and has a 7 inch flat bottom. Great for using with MD20 for sampling (see above left picture).
